Active Object List

BorderLayout Instance contains...

inUse Flag
Framework Type
Object Type
Method Type

Horizontal and
Vertical Gaps to be
left between drawn
components

Reference to
Container Instance

References to North,
South, West and East
Components

Component Instance contains...

inUse Flag
Framework Type
Object Type
Method Type

x,y,width,height

Reference to
container / parent
instance

"Peer" Object Type

Cursor drawn over
Component

Reference to font
instance

String Object
containing label dis-
played in Component

Foreground Color
Background Color

Link to next Component in Container obj

Container Instance contains...

inUse Flag
Framework Type
Object Type
Method Type

Number of enclosed
Components

Inset values with respect to window

Reference to Layout
Manager instance

Reference to inherited
Component instance

Type of Layout Mgr

Reference to first
instance of
Component in linked
list of Components

Resize flag

Reference to
MenuBar Instance

Cursor to draw over
Container

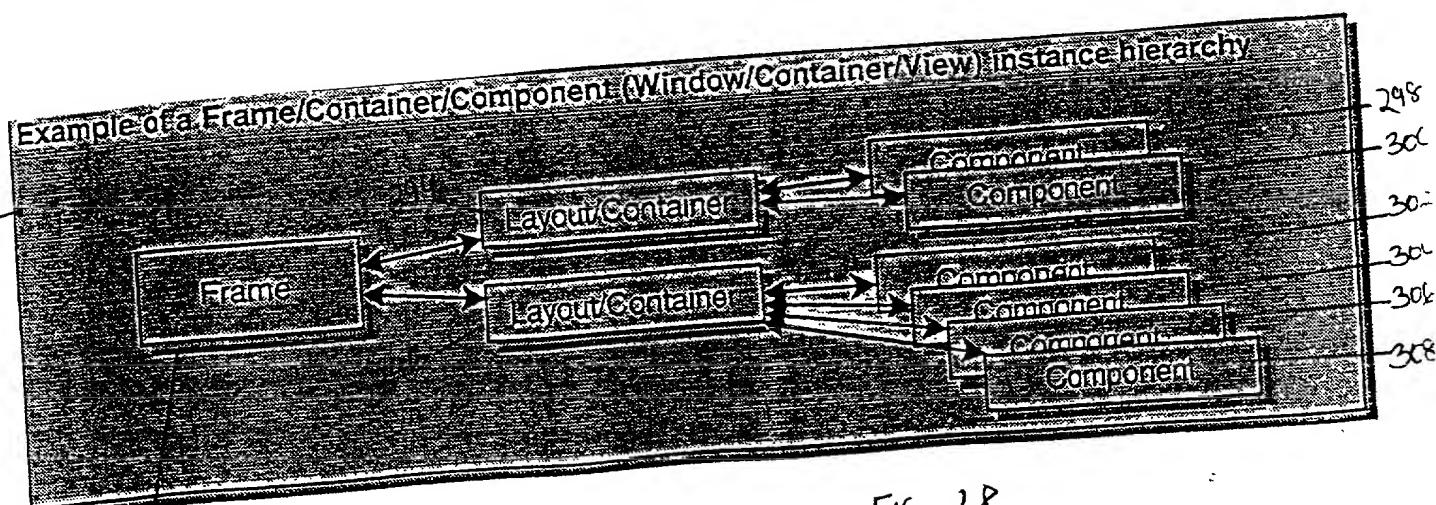

FIG 18

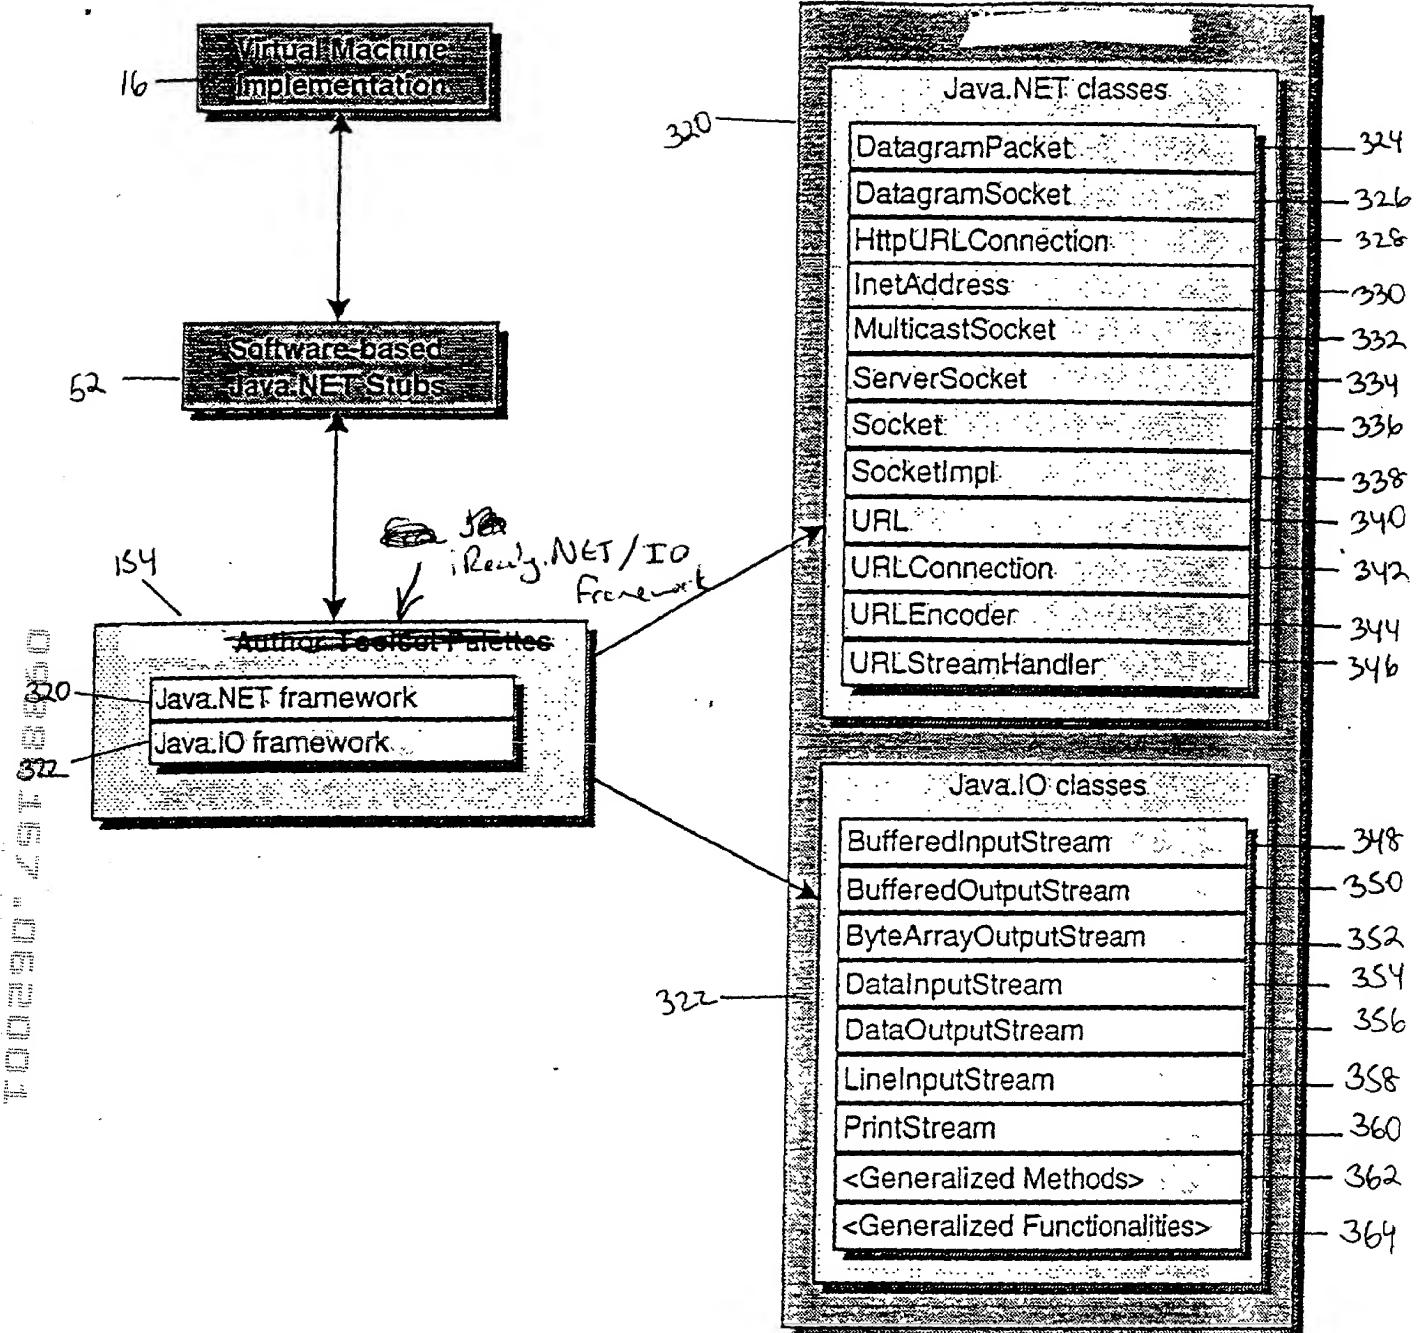

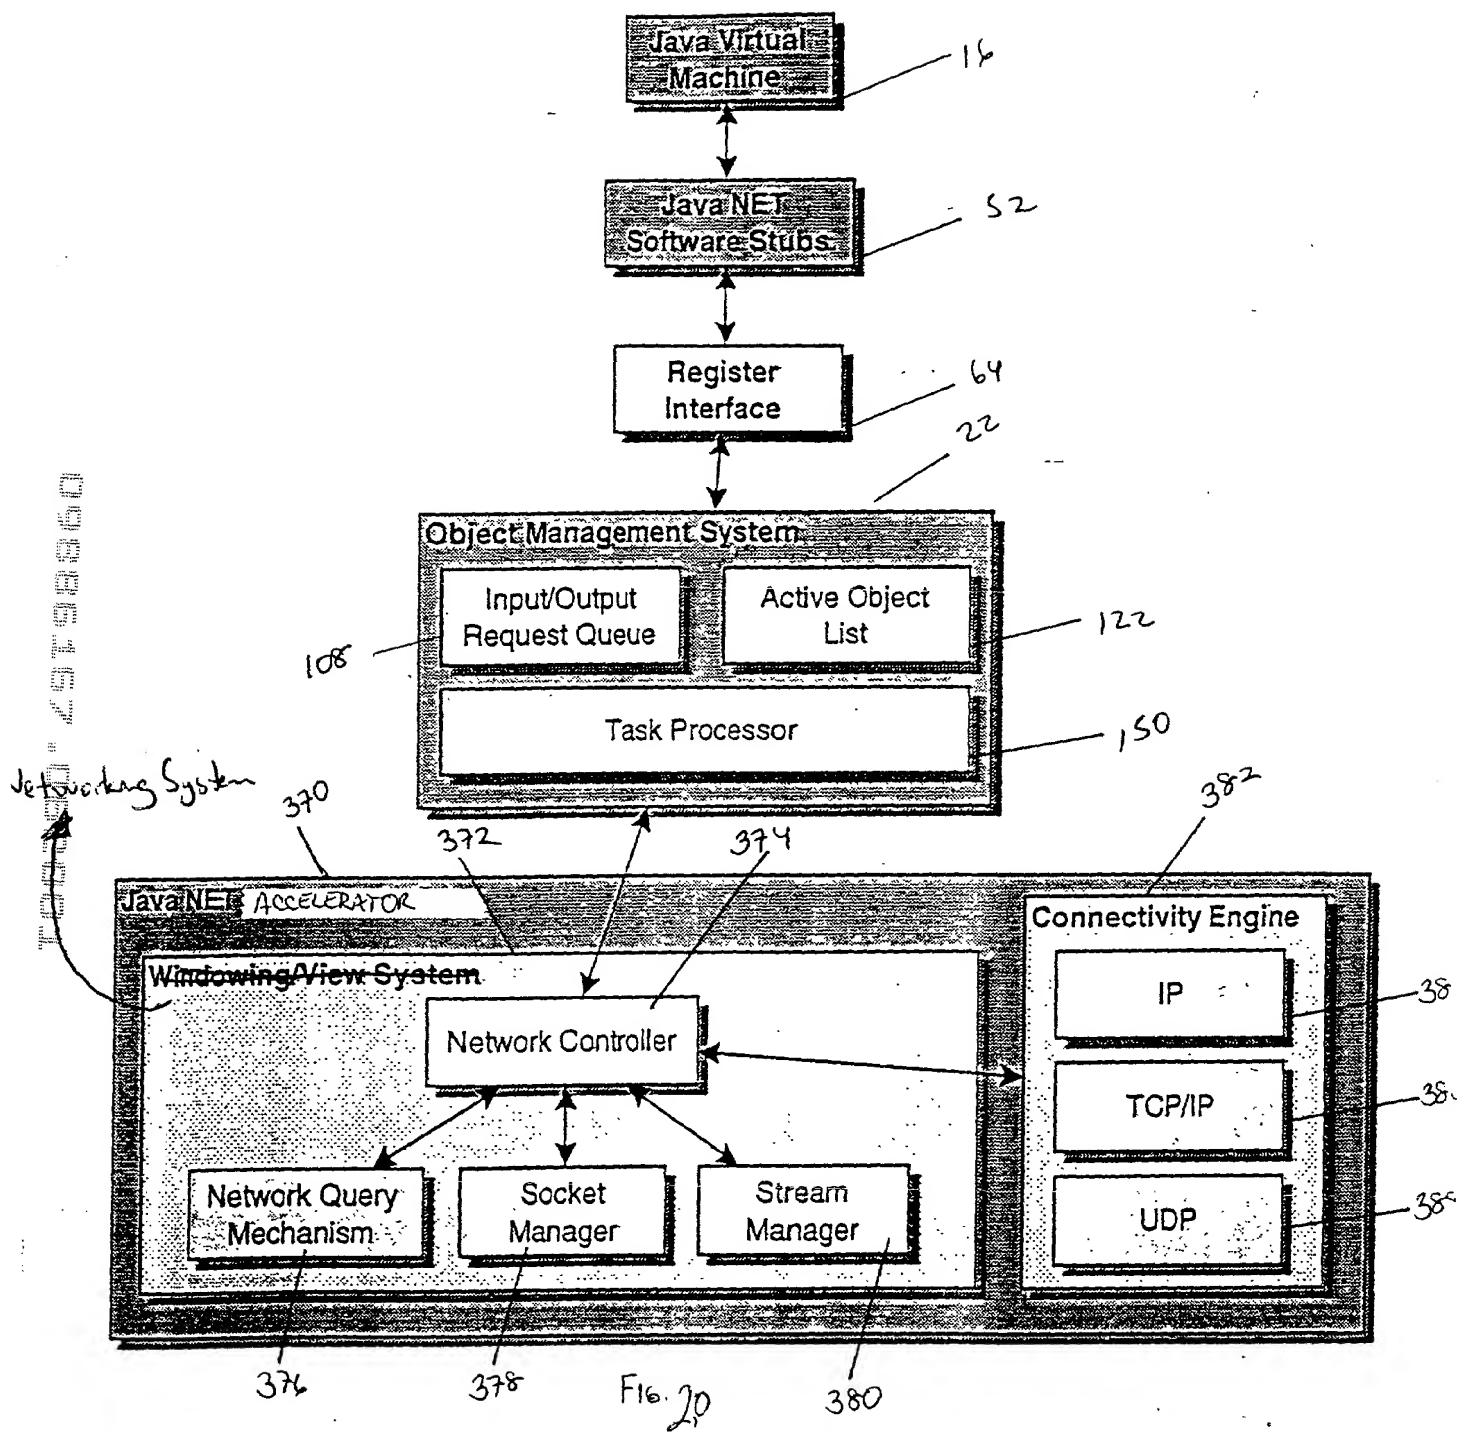

Fig 19

Network Controller

- Signals DNS queries
- Signals socket creation (allows multiple simultaneous sockets)
- Conducts Network Input and Output
- Signals closing of sockets
- Operates as an abstraction layer over TCP and UDP protocols
- May operate either synchronously or asynchronously

37

Network Query Mechanism

- Performs DNS lookups and reports result to the Network Controller

37b

Socket Manager

- Manages sockets in use by applications (Opens and Closes them)
- Determines container that event occurred in and tells it to update if necessary
- Transfers socket status when requested up to the Network Controller

37c

Stream Manager

- Shuttles character/stream based input and output over the TCP/IP or UDP link
- Offers a choice of input/output streams that differ for the application's use
- Transfers buffers when requested up to the Network Controller

38c
